

NunoX - Sr. AI Algorithm Engineer

About Us

NunoX

厭倦了在傳統產業中疊代舊技術？NunoX (聯覺科技) 正在為有抱負的工程師提供一個極具挑戰且充滿意義的舞台。我們不只是做軟體，我們是** AI 時代紡織業的數位孿生 (Digital Twin) 創造者**。在這裡，你將直接面對 AI 演算法的最前沿挑戰，包括：如何利用深度學習精確重建布料的光學外觀、複雜紋理和真實物理特性（例如完美的垂墜度）。

身為 NunoX 的工程師，你將負責打造一個橫跨高精度 3D 掃描硬體、雲端 AI 平台 和 即時視覺化服務 的完整技術棧。我們是 NVIDIA Inception Program 的精選夥伴，代表你的工作成果將有機會運行在頂尖的 GPU 算力基礎設施上。如果你渴望在高難度的跨域整合、機器學習和高性能計算中磨練技能，並親手實現一個能幫助全球品牌（如 Under Armour）和製造商走向永續淨零目標的產品，NunoX 就是你將技術熱情轉化為巨大產業影響力的最佳戰場。我們需要的不只是寫程式的人，而是能解決**「不可能的數位化」**難題的技術革新者。

About The Role

We're looking for a Senior AI Algorithm Engineer with a strong background in image processing and vision-language AI. You will lead the design and optimization of cutting-edge computer vision and inference algorithms, with applications spanning color analysis, image stitching, and multimodal understanding.

This role requires hands-on experience in deep learning, cloud deployment, and production-level AI integration. You'll also work with frameworks such as NVIDIA NeMo and deploy AI services using NIM to cloud platforms like GCP and AWS, with Kubernetes for orchestration.

What You Will Do

- Design and implement deep learning models for image processing, object detection, and anomaly detection
- Develop models for color recognition, color classification, and image-based feature analysis
- Fine-tune or integrate Large Language Models (LLMs) for vision-language tasks such as captioning, semantic search, and classification
- Optimize models for accuracy, inference speed, and resource efficiency
- Deploy and scale model services on GCP / AWS using Kubernetes (K8s)
- Utilize NVIDIA NeMo to train and deploy LLMs or VLMs, and package models into lightweight Docker containers served via NIM architecture
- Collaborate closely with product, frontend, and backend teams to integrate AI features into real-world applications

Who We Are Looking For

- 4+ years of hands-on experience in AI, computer vision, or image processing
- Proficiency in Python and libraries like OpenCV, NumPy, TensorFlow or PyTorch
- Familiarity with image preprocessing, feature extraction, segmentation, and stitching techniques
- Experience working with LLM frameworks (e.g., Hugging Face Transformers, LLaMA)
- Strong foundation in color analysis techniques (e.g., color space transformation, histogram analysis, color invariance)
- Practical experience deploying models to cloud environments (GCP / AWS)
- Skilled in Docker and packaging AI services for scalable deployment
- Self-driven, curious, and comfortable experimenting with new AI techniques

Bonus Points (Preferred)

- Experience with NVIDIA Triton Inference Server or multi-model serving
- Knowledge of MLOps workflows and automation (e.g., CI/CD pipelines, testing, monitoring)
- Hands-on use of NVIDIA NeMo and deployment via NIM
- Familiarity with Prompt Engineering, RAG, or LoRA fine-tuning
- Exposure to observability tools like Prometheus and Grafana
- Understanding of GitOps and Infrastructure as Code (e.g., Terraform)
- Kubernetes orchestration expertise (e.g., Helm charts, autoscaling, service deployment)

Interview Process

- Stage 1: Technical Interview with AI Lead (approx. 60 mins)
- Stage 2: Final Interview with CEO (approx. 60 mins)

Office Location

- 台北市松山區（近捷運中山國中站）

Salary Range

- Compensation is negotiable and will be determined based on experience and qualifications.
